MANN-FILTER – Perfect parts. Perfect service.

www.mann-filter.com

MANN-FILTER Product Portfolio

The service life and efficiency of your off-highway industrial equipment depend in large part on making the right choice of filters. High-quality filters are essential for functional reliability, durability and energy efficiency of your vehicles. Don't compromise and opt for MANN-FILTER products in original equipment quality. All MANN-FILTER products are manufactured according to the latest international production and test standards for the off-highway industry. They stand for best component quality, have shown to excel due to consistently high and reliable filtration performance and secure a long service life.

The right filter in an instant!

At MANN-FILTER we're experts in OE quality and aftermarket filters. Our extensive range of **6,800 superior original equipment quality filters** protect engines, passengers and machines in over 300,000 applications. Thanks to over 70 years experience and filtration expertise, our innovative, premium OE and boxed yellow-green aftermarket filters are built to withstand the demands placed on vehicles and machines and to meet stringent safety and industry standards.

Benefits that pay for you:

- ⊕ Product in OE quality
- ⊕ Extensive range
- ⊕ Long service life even under the harshest conditions
- ⊕ Continuous innovation in products

Filter Media Excellence

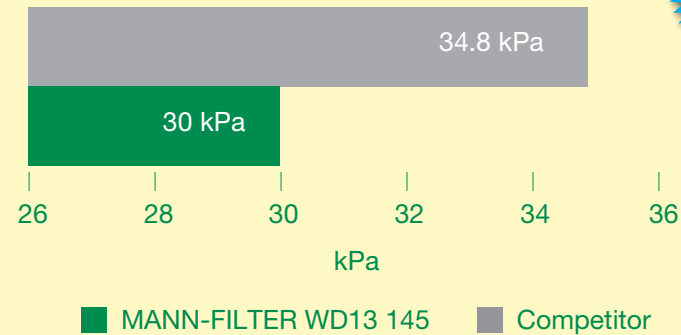

50% Filtration Efficiency

Filters
17% smaller
particle
size

MANN-FILTER maintains good filtration efficiency, filtering 17% smaller particle size than competitor brands.

Differential Pressure (DP)

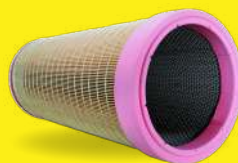

Performs
at 14%
lower DP

Differential pressure (DP) is 14% lower than competitor brands. This allows lesser pressure required at the filter resulting in more efficient fuel consumption.

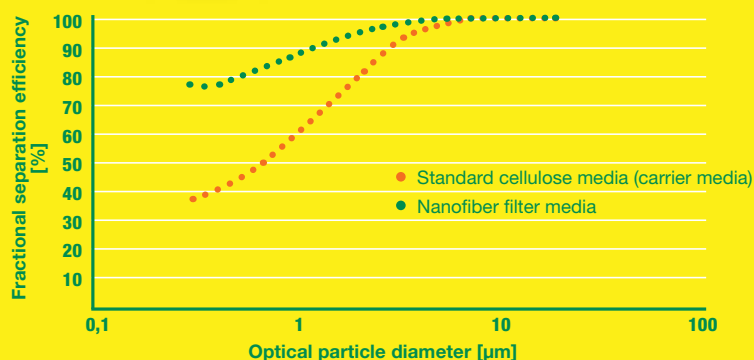

Air Filter Elements

Secondary Air Filters

CompacPlus® Air Filter Elements

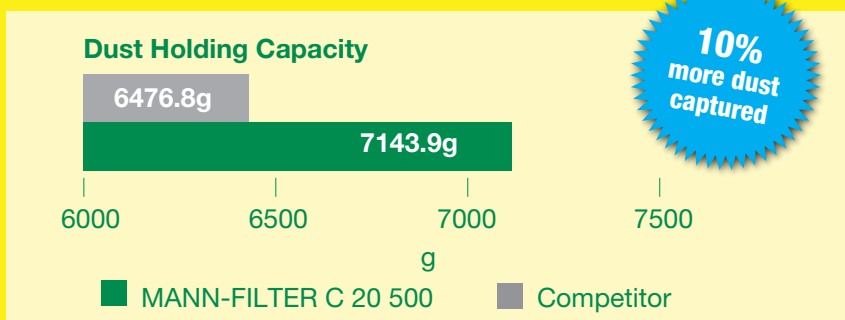

Flat sheet test with ISO fine test dust (ISO 12103-01: A2). Determination of fractional separation efficiency during the first 60 seconds. The curves shown are based on average values. Individual values may deviate slightly. Fractional separation efficiency changes with changed test conditions.

MANN-FILTER develops **nanofiber coated filter media** for the highly efficient separation, also amongst others, of fine particles. Air filter media from MANN-FILTER are characterized by a verifiably higher separation efficiency along with the high dust holding capacity.

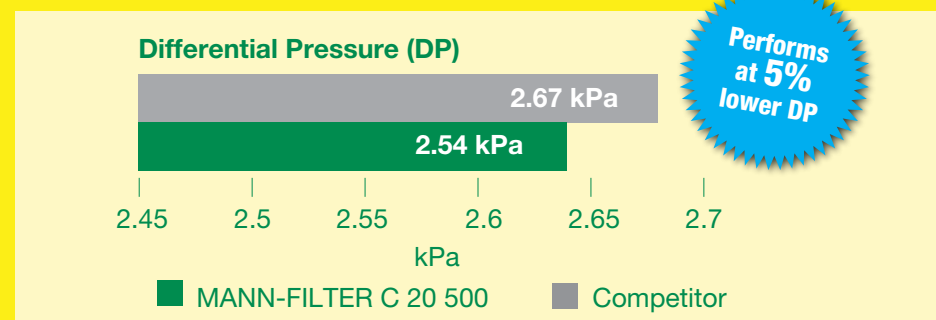

A high-tech nanofiber coated filter media from MANN-FILTER is the first choice for vehicles which work in environments with a high level of soot or fine dust pollution. Typical application areas here are dusty construction sites, mines and car rallies.

In the diagram on the left, it has been proven that nanofiber coated filter media offers better filtration efficiency for fine particles.

Filter Media Excellence

MANN-FILTER captures at least 10% more dust as compared to competitor brands.

Differential pressure (DP) with secondary element is 5% lower than competitor brands. MANN-FILTER maintains better air flow to the combustion system.

Inline Fuel Filters

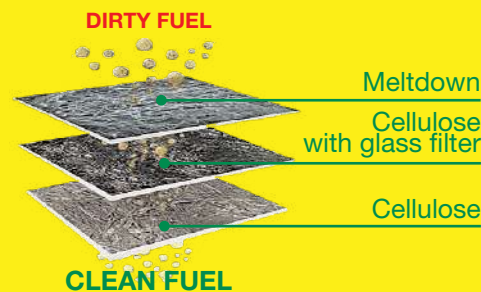

Filter Media Excellence

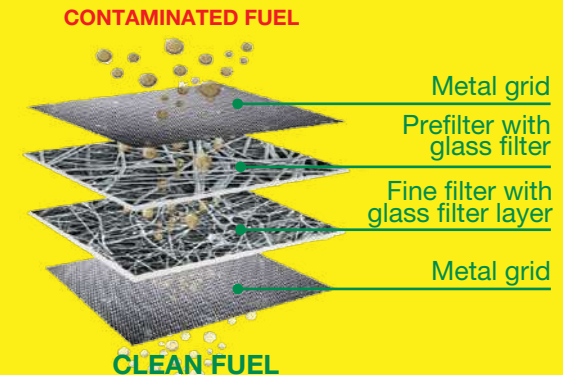

Multigrade F-PF and PFO

- Initial separation efficiency for $4\text{ }\mu\text{m}$ > 10% to 30%
- Water separation > 93%

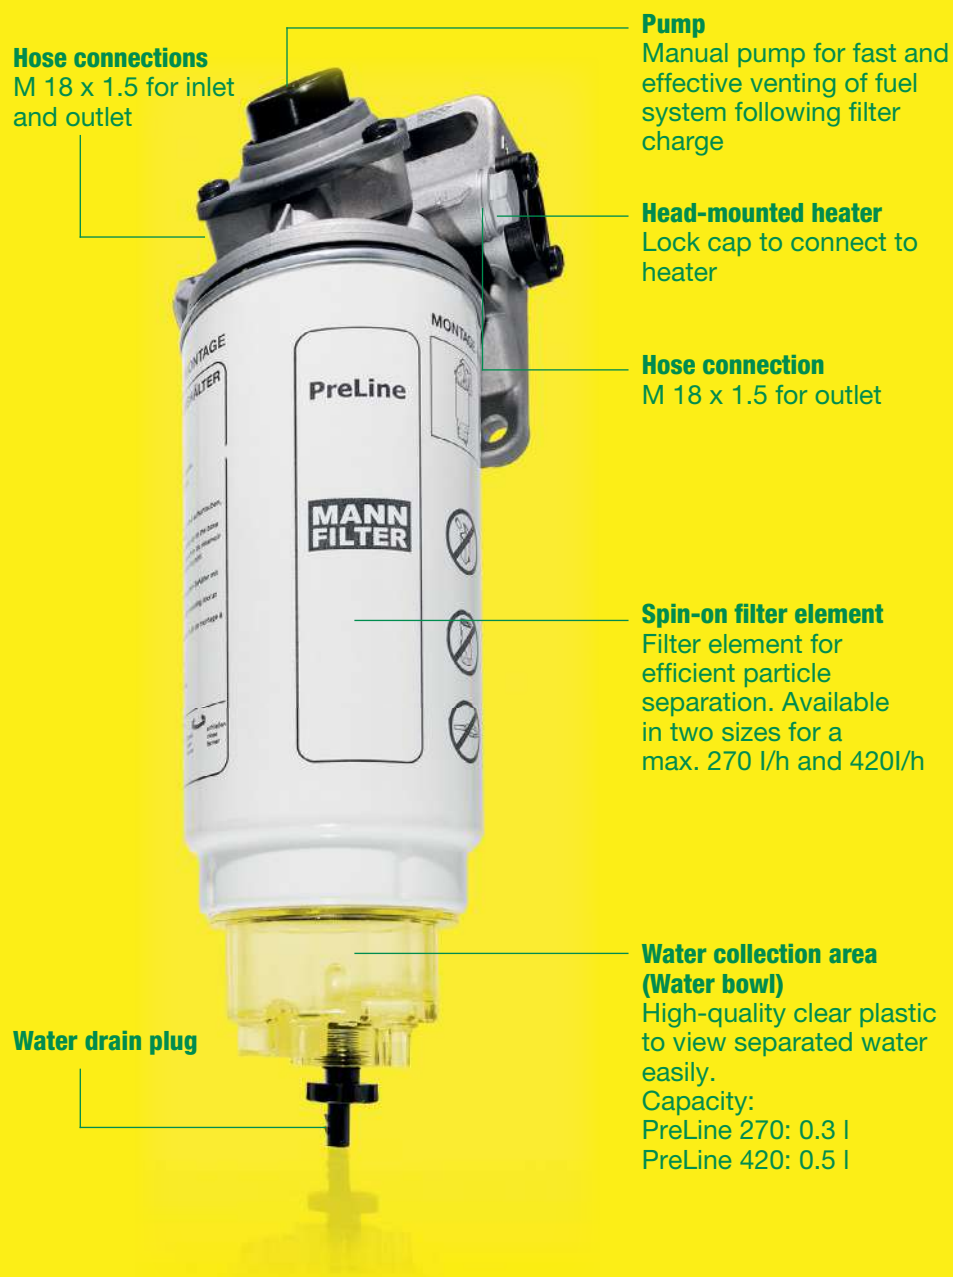

Multigrade F-MB 333.1

- Initial separation efficiency for $4\text{ }\mu\text{m}$ > 99.7%
- Dirt holding capacity up to 110 g/m^2

Multigrade F-G 5000.1

- Initial separation efficiency for $4\text{ }\mu\text{m}$ > 99.98%
- Dirt holding capacity up to 190 g/m^2

PreLine

The MANN-FILTER PreLine system provides highly efficient filtration of from 50 l/h to 600 l/h for all diesel engines. Whether it is for the latest common rail injection systems, in-line or distributor injection pumps – PreLine consistently protects against wear and corrosion from contaminant particles and water.

- ① Particle separation
- ② Water drop coalescence
- ③ Water separation

MANN-FILTER Preline Fuel Filter also features excellence in water separation in 3 stages:

- **First stage - Particle separation**
Removes solid dirt particles from the diesel fuel.
- **Second stage - Water drop coalescence**
Retains even the finest water droplets from the fuel/water emulsion and combines them to form much larger drops.
- **Third stage - Water separation with a hydrophobic sieve**
Ensures that the enlarged drops do not enter the injection system.

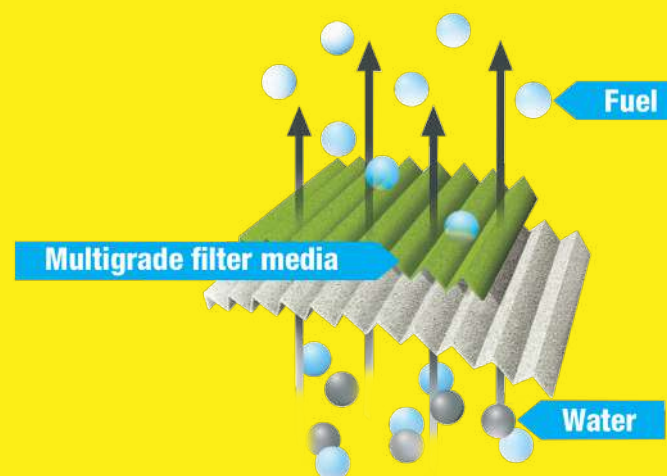

Diagram illustrating water separation through the filter medium

Hydraulic Filter

MANN-FILTER keeps hydraulic systems **running smoothly in tough conditions, protecting against dirt particles, corrosion and abrasion** even under heavy loads.

Meet the benefits:

- ⊕ **Optimal system efficiency and peak performance** — through state-of-the-art media technology
- ⊕ **Safety and reliability** — long-term protection of your engine and investment
- ⊕ **Significant reduction of downtime** — effective filtration reduces equipment repair and maintenance time, and lowers total ownership expenses

Special Applications

Air Dryer Cartridges

Dehumidify and clean compressed air, especially in commercial vehicles, preventing moisture build-up and damage in your system.

Coolant Filters

Provides crucial protection for the coolant circulation system to ensure reliable cooling in extreme conditions.

Urea Filters

Safeguard the sensitive Selective Catalytic Response (SCR) systems against contaminants with MANN-FILTER urea filters, designed to give optimum protection for your machine.

Transmission Oil Filters

Ensure high levels of oil purity and thus optimum wear protection for the sensitive transmission components.

Centrifuge Rotors

High separation efficiency, which removes even the smallest solid particles (1 μm) such as dust, rust and soot, to clean your engine oil and protect components. The rotor continuously impounds the separated particles during operation and must be replaced regularly for optimum function.

Air Oil Separator

Ensures high separation rates and low residual oil contents which minimizes oil loss. MANN-FILTER air oil separator saves energy, which conserves resources and reduces operating costs.
