LOW2

Low energy, very high rejection brackish water **RO** elements

The Oltremare LOW2 series of brackish water RO membranes delivers consistent and continuous high performance for the highest quality water. Because of its high-performance rate and chemical resistance, it can be used for a variety of purposes. It is used in producing drinking water, industrial water, pharmaceutical water, wastewater treatment, and concentration of food and/or medicine. Oltremare LOW2 elements are available in standard 2.5", 4", and 8" spiralwound designs to meet all your new equipment and direct replacement needs.

d. Refer to temperature and pH limits in Membrane Cleaning Guide - Water

Application Elements (TSG-C-001).

Pretreatment is recommended for the removal of free chlorine and other oxidizing agents to prevent damage to membranes. Oxidizing agents, such as free chlorine, in contact with polyamide membranes may result in shortened operating life or membrane failure. Such oxidation damage is excluded from warranty. Refer to Membrane Operating Guide -Recommendations for Water Purification (TSG-O-012)
