a. Test conditions: 1,500 ppm NaCl, 10.3 bar (150 psi), 25°C (77°F), 15% recovery, pH 6.5 - 7, 30 minutes operation. Flow rates will be no more than 15% below the values shown. Product specifications may change without notice as design revisions occur.

b. Minimum and stabilized salt rejection for modules from 2514 to 4021.

c. Minimum and stabilized salt rejection for modules 4040.

d. Models from 2514 to 4040 can be both fibreglassed and tape wrapped.

e. Refer to temperature and pH limits in Membrane Cleaning Guide - Water Application Elements (TSG-C-001).

f. Pretreatment is recommended for the removal of free chlorine and other oxidizing agents to prevent damage to membranes. Oxidizing agents, such as free chlorine, in contact with polyamide membranes may result in shortened operating life or membrane failure. Such oxidation damage is excluded from warranty. Refer to Membrane Operating Guide - Recommendations for Water Purification (TSG-O-012).

g. Shipping weight is dependent on packaging material and quantity shipped.

h. For female elements, "C" is the inner diameter. For male elements, "C" is the outer diameter.

i. Male elements have a protruding permeate tube, indicated as "D" in the diagram.

Dimension "D" is 30.5 mm (1.2 in) for modules from 2514 to 4021. For 4040 module is 26.7 mm (1.05 in).

IMPORTANT INFORMATION

Start-up: We recommend flushing elements for 30 minutes at low pressure and discarding permeate during the flush prior to operation. For further information, please see Element Start-Up Guide – System Start-Up (TSG-O-005).

Cleaning: Oltremare membrane elements must be cleaned periodically to ensure proper operation and to prevent membrane damage. Please see Membrane Cleaning Guide – Water Application Elements (TSG-C-001).

Storage: Oltremare membrane elements must be stored appropriately to ensure proper operation and to prevent membrane damage. Please see Element Storage Guides (TSG-O-009 & TSG-O-010).
